

Graduation Project

Welcome to the final stage of our diploma ,

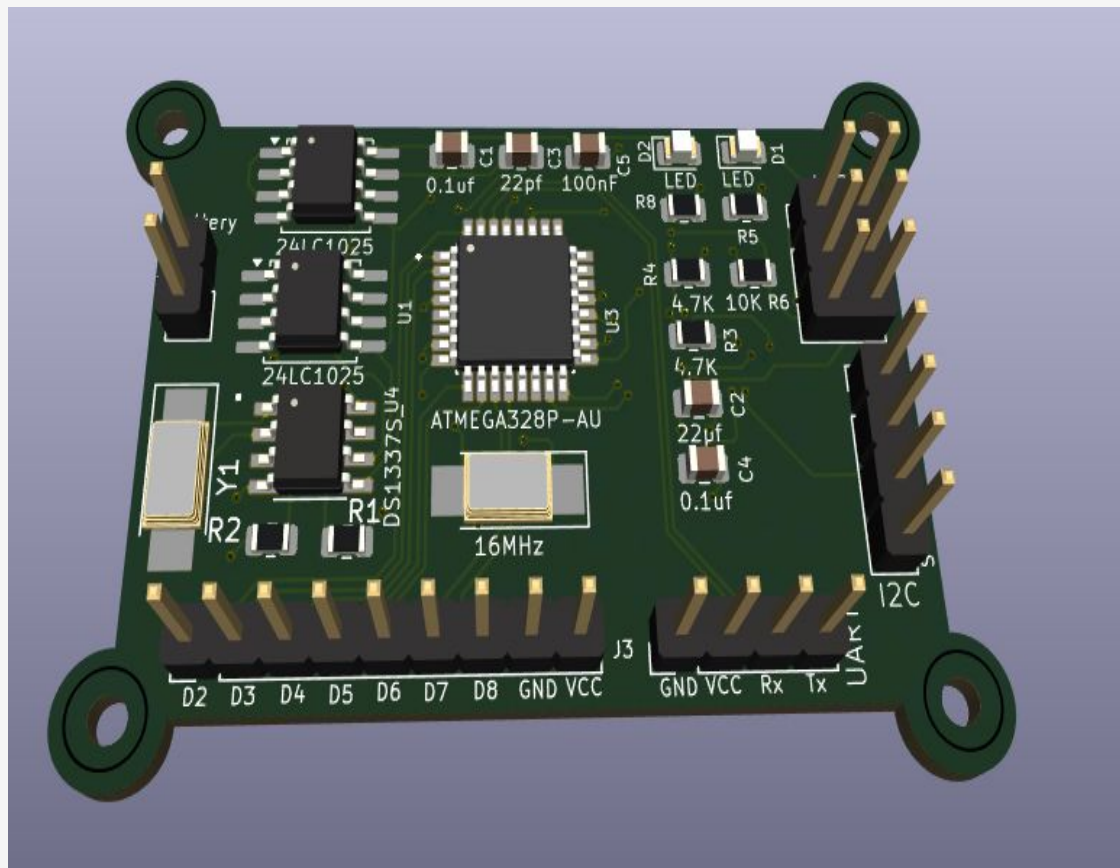

Project outline : create MCU DataLogger board based on atmega328p-Au microcontroller ,
the board will contain the following components ,

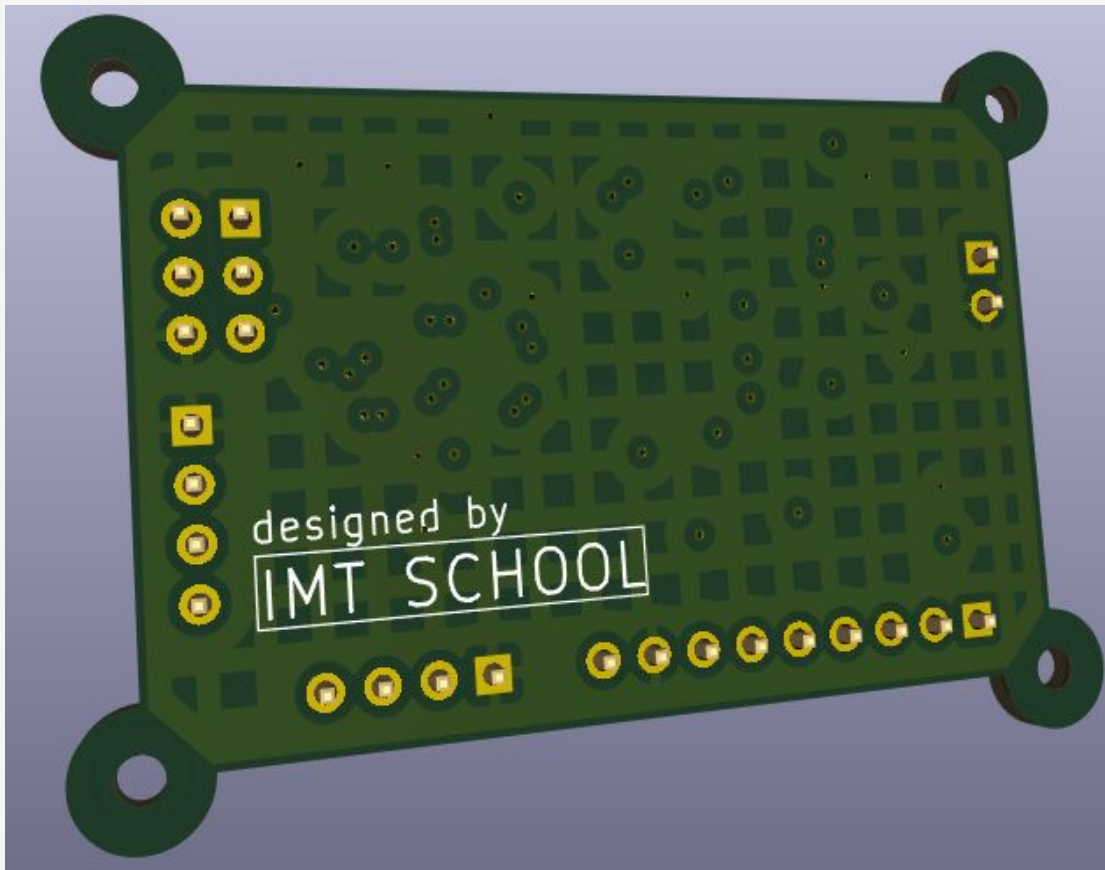

1- **atmega328p**-Au MC

2- two **EEPROM** chip (24LC1025)

3- **RTC**(Real time clock) chip DS1337S_

- 4- Indicator leds for power source and SPI clk signal
- 5- create connectors for interfacing with UART,SPI,I2C modules in the microcontroller
- 6- create another schematic sheet for the connectors
- 7- apply custom logos on the silkscreen as well as pin identification should be shown on the silkscreen , write your name and group id on the Back silkscreen
- 8-create gerbers and drill files for manufacturing
